Data Diagnostics® real-time, on-demand patient analytics **at the point of care**

Today's healthcare environment is driven by data to improve clinical and quality outcomes, achieve cost efficiencies, and help enhance financial performance. Data Diagnostics® is a suite of patient-specific, real-time analytics that can be accessed on demand by clinicians at the point of care within their existing workflow.

Three distinct categories of patient health analytics

Clinicians can access patient-specific insights within seconds:

Quality-Related Analytics: Provides a comprehensive picture of patients' current or predicted clinical and quality gap status for specific quality measurements (e.g., CMS 5-Star, ACA QRS or NCQA/HEDIS®) and actions needed to improve quality.

Historical Data-Related Analytics: Provides insight into detailed medical history to help inform diagnosis, potentially reduce encounter time, avoid duplicative exams or tests, and aid in patient evaluation and diagnosis for more efficient and improved care.

Risk Score-Related Analytics: Provides insight into patient risk score accuracy gaps (e.g., HCC, CRG, CDPS, etc.) and supports accurate disease burden documentation of unaddressed or worsening conditions to achieve a more accurate understanding of patient-specific disease burden.

**The numbers speak for themselves. Data Diagnostics®:**

Draws from 2 of the **world's largest datasets** of clinical, claims, quality, and laboratory data

Includes Quest's **20 billion** clinical laboratory test results

Provides Inovalon's data from more than **158 million patients**

Easy integration, answers in seconds

Because it can be ordered within the existing workflow of the clinical encounter, Data Diagnostics® is as simple as ordering a traditional laboratory CBC, and the HIPAA-compliant analytical results are returned within seconds* to inform the clinical encounter in real time.

*Results are delivered in real time after an order is received by Quest; turnaround time can vary from system to system. Report information is based on data contained in existing datasets.

Robust Datasets & Actionable Insights

Physician enters orders and views results via

Care360®
or
Quest's integration with nearly 600 EHR platforms

Patient-specific report

Data Diagnostics®

Patient-specific, actionable reports **returned in seconds**

Data Diagnostics® benefits the entire healthcare community by helping to improve quality cost, and financial performance.

Health plans—Seamlessly implements analytics across the provider network, helping to achieve key business goals of improving quality outcomes and metrics.

Providers—Provides real-time insights at the point of care within current workflows to enable clinicians to make faster, more informed decisions that support improved outcomes, streamline operations, and achieve quality metrics.

Patients—Enhances the patient encounter and the continuity of care by providing clinicians actionable insights at the point of care in their typical workflow.

Health systems—Complements healthcare initiatives for employed and affiliated physicians. Offers access to real-time information at the point of care that can be easily integrated into existing operational models to help improve financial performance and quality metrics.
